WHAT IS CLAIMED IS:

5

20

- 1. An image forming apparatus capable of being contained in a container stand as a placement stand, said container being separate from said image forming apparatus.
- 3. An image forming apparatus according to Claim1, further comprising:

a battery; and

charging means for charging said battery, wherein the charging of said battery is conducted by containing the apparatus in said container stand at the time of non-use.

An image forming apparatus according to Claim
 wherein said battery and said charging means are
 incorporated in a charging device structured to be
 attachable to and detachable from said image forming

apparatus, and the charging of said battery is conducted by containing in said container stand said charging device in the status of being mounted on said image forming apparatus.

5

5. An image forming apparatus according to Claim 4, wherein on the backside of said charging device, the contact point portion is provided, and the contact terminal portion is provided for said container stand, and said contact point portion and said contact terminal portion are electrically connected by containing said image forming apparatus having said charging device mounted thereon in said container stand.

15

20

- 6. An image forming apparatus according to Claim 5, wherein the contact point portion of said charging device, and said contact terminal portion of said container stand are arranged in the central portion of the connecting surface of said charging device and said container stand, respectively, and are in a symmetrical mode.
- 7. An image forming apparatus according to Claim
 6, wherein said cradle is provided with a shutter
 mechanism for protecting said contact terminal portion,

and said shutter mechanism retracts by containing said image forming apparatus having said charging device mounted thereon in said container stand.

8. An image forming apparatus according to Claim 7, wherein the load required for pressurizing said contact terminal portion to be in contact and retracting said shutter mechanism is smaller than the weight of said charging device alone.

10

- 9. An image forming apparatus according to Claim
 4, wherein said charging device is provided with a
 portion to hide the DC jack for input use for said
 image forming apparatus, and when said image forming
 apparatus having said charging device mounted thereon
 is contained in said container stand, the structural
 portion of said container stand covers said jack for DC
 input use of said charging device.
- 10. An image forming apparatus according to Claim
 3, wherein said battery is incorporated in said image
 forming apparatus, and said charging means is
 incorporated in said container stand, and said battery
 is charged when said image forming apparatus is

 25 contained in said container stand.

11. An image forming apparatus according to Claim
1, wherein on the backside of said image forming
apparatus the contact point portion is provided, and
the contact terminal portion is provided for said
container stand, and said contact point portion and
said contact terminal portion are electrically
connected by containing said image forming apparatus
having said charging device mounted thereon in said
container stand.

10

- 12. An image forming apparatus according to Claim

 1, wherein the contact point portion of said image

 forming apparatus and said contact terminal portion of

 said container stand are arranged in the central

 portion of the connecting surface of said charging

 device and said container stand, respectively, and are

 in a symmetrical mode.
- 13. An image forming apparatus according to Claim
 20 5, wherein said container stand is provided with a
 shutter mechanism for protecting said contact terminal
 portion, and said shutter mechanism retracts by
 containing said image forming apparatus having said
 charging device mounted thereon in said container
 25 stand.

- 14. An image forming apparatus according to Claim 5, wherein the load required for pressurizing said contact terminal portion to be in contact and retracting said shutter mechanism is smaller than the weight of said image forming apparatus.
- 15. An image forming apparatus according to Claim 3, wherein either said charging device or said image forming apparatus is provided with indication means for showing the charging condition of said battery, and said indication means is structured to be recognizable even when said image forming apparatus is contained in said container stand.
- 16. An image forming apparatus according to Claim 5, wherein said indication means for showing the charging condition of the battery is recognizable even when said image forming apparatus is contained in said container stand in any direction, forward or backward, and said contact point portion and said contact terminal portion are electrically connectable.
- An image forming apparatus according to Claim
 , wherein a recording sheet supply tray dually
 functioning as a cover capable of being open and closed
 with respect to said image forming apparatus is

5

structured not to open when said image forming apparatus is contained in said container stand.

18. An image forming apparatus according to Claim

1, wherein said image forming apparatus can be
contained in said container stand in the status having
an I/F cable connected thereto.
